

CORRELATION DIRECTORY FOR BUSINESS AND INDUSTRY ENDORSEMENTS

USER GUIDE

Rational for Updates

Career and Technical Education (CTE) is now organized into specific programs of study named in NAC 388.803 and described in the Nevada *CTE Statewide Course Catalog*. All programs of study must follow industry validated standards and are accountable by way of a state wide end-of-program assessment for completion level students. Updates to the Business and Industry (B&I) Correlation Directory align endorsement names and assignment codes to current CTE programs per NAC 391.420. With a few exceptions, the correlation between a B&I endorsement and program assignment is one on one. The assignments include all courses in a program of study. For a complete listing of CTE programs of study and course descriptions, see the course catalog on the [Department of Education](#) website.

Additionally, B&I endorsements for the Performing Arts and JROTC have been listed separately to align to revisions to NAC 391.420.

Licenses issued after August 1, 2016, will follow the new endorsement names; old endorsement codes (seen in orange) remain in effect for those currently licensed.

Work-based learning and Career Development Assignments

Work-based learning in any form is a key component of CTE and may be assigned to any teacher with a CTE Business and Industry endorsement. Likewise, career exploration courses may also be taught by all CTE licensed teachers.

Computer Literacy/Computer Applications

The assignment codes for teaching computer literacy in elementary, 7th & 8th grades, and secondary are separated out in order to differentiate the level in which it is being taught. Only the secondary assignment code includes courses at the high school level.
