

Kindergarten Computer Science Standards

Networks and the Internet

Students who demonstrate understanding can:

Indicator	Standard
K.NI.C.1	Explain that a password helps protect the privacy of information.

Practice Connection	Concept Connection
<p>Practice 7. Communicating About Computing <i>3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (K.NI.C.1).</i></p>	<p>Networks and the Internet</p> <ul style="list-style-type: none"> • NI.C: Cybersecurity - <i>Connecting devices to a network or the Internet provides great benefit. Care must be taken to use authentication measures, such as strong passwords, to protect devices and information from unauthorized access (K.NI.C.1).</i>

	Connections to other NVACS at this grade level
NVACS for Science	(K.NI.C.1) – CCC: Cause and Effect
NVACS for Mathematics	SMP 3 & 4
NVACS for ELA	(K.NI.C.1) – W.K.2
NVACS for Social Studies	None

Grade 1 Computer Science Standards

Algorithms and Programming

Students who demonstrate understanding can:

Indicator	Standard
1.AP.PD.1	Describe the iterative process of program development (including terminology, steps taken, and the logic of choices).
1.AP.V.1	Model the way programs store and manipulate data by using numbers or other symbols to represent information.

Practice Connection	Concept Connection
<p>Practice 7. Communicating About Computing <i>2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (1.AP.PD.1).</i></p> <p>Practice 4. Developing and Using Abstractions <i>4. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes (1.AP.V.1).</i></p>	<p>Algorithms and Programming</p> <ul style="list-style-type: none"> AP.PD: Program Development - <i>People develop programs collaboratively and for a purpose, such as expressing ideas or addressing problems (1.AP.PD.1).</i> AP.V: Variables - <i>Information in the real world can be represented in computer programs. Programs store and manipulate data, such as numbers, words, colors, and images. The type of data determines the actions and attributes associated with it (1.AP.V.1).</i>

	Connections to other NVACS at this grade level
NVACS for Science	(1.AP.PD.1) – CCC: Patterns, SEP: Obtaining, Evaluating and Communicating Information (1.AP.V.1) – CCC: Systems and System Models, SEP: Analyzing and Interpreting Data
NVACS for Mathematics	SMP 2, 3, 4; 1.MD.C.4
NVACS for ELA	(1.AP.PD.1) – W.1.2, W.1.3 (1.AP.V.1) – SL.1.5
NVACS for Social Studies	None

Grade 2 Computer Science Standards

Algorithms & Programming

Students who demonstrate understanding can:

Indicator	Standard
2.AP.C.1	Develop programs with sequences and loops, to express ideas or address a problem.
2.AP.M.1	Break down (decompose) the steps needed to solve a problem into a precise sequence of instructions.
2.AP.PD.1	Develop plans that describe a program's sequence of events, goals, and expected outcomes.
2.AP.PD.2	Give attribution (credit) when using the ideas and creations of others while developing programs.

Practice Connection	Concept Connection
<p>Practice 3. Recognizing and Defining Computational Problems</p> <p>2. Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures (2.AP.M.1).</p> <p>Practice 5. Creating Computational Artifacts</p> <p>1. Plan the development of a computational artifact using an iterative process that includes reflection on and modification of the plan, taking into account key features, time and resource constraints, and user expectations (2.AP.PD.1).</p> <p>2. Create a computational artifact for practical intent, personal expression, or to address a societal issue (2.AP.C.1).</p> <p>Practice 7. Communicating About Computing</p> <p>2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (2.AP.PD.1).</p> <p>3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (2.AP.PD.2).</p>	<p>Algorithms & Programming</p> <ul style="list-style-type: none"> AP.C: Control - <i>Computers follow precise sequences of instructions that automate tasks. Program execution can also be nonsequential by repeating patterns of instructions and using events to initiate instructions (2.AP.C.1).</i> AP.M: Modularity - <i>Complex tasks can be broken down into simpler instructions, some of which can be broken down even further. Likewise, instructions can be combined to accomplish complex tasks (2.AP.M.1).</i> AP.PD: Program Development - <i>People develop programs collaboratively and for a purpose, such as expressing ideas or addressing problems (2.AP.PD.1 and 2.AP.PD.2).</i>

NVACS for Science	(2.AP.C.1) – SEP: Developing and Using Models, SEP: Asking Questions and Defining Problems (2.AP.M.1) – SEP: Analyzing and Interpreting Data (2.AP.PD.1) – ETS 1B: Developing Possible Solutions, SEP: Obtaining, Communicating, and Evaluating Data, SEP: Planning and Carrying Out Investigations
NVACS for Mathematics	None
NVACS for ELA	(2.AP.C.1) – W.2.2, RI.2.3 (2.AP.M.1) – W.2.2 (2.AP.PD.1) – L.2.4 (2.AP.PD.2) – SL.2.2, SL.2.4
NVACS for Social Studies	None

Grade 2 Computer Science Standards

Computing Systems

Students who demonstrate understanding can:

Indicator	Standard
2.CS.T.1	Describe basic hardware and software problems using accurate terminology.

Practice Connection	Concept Connection
<p>Practice 6. Testing and Refining Computational Artifacts 2. Identify and fix errors using a systematic process (2.CS.T.1).</p> <p>Practice 7. Communicating About Computing 2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (2.CS.T.1).</p>	<p>Computing Systems</p> <ul style="list-style-type: none"> CS.T: Troubleshooting - <i>Computing systems might not work as expected because of hardware or software problems. Clearly describing a problem is the first step toward finding a solution (2.CS.T.1).</i>

	Connections to other NVACS at this grade level
NVACS for Science	None
NVACS for Mathematics	SMP 2 & 6
NVACS for ELA	(2.CS.T.1) – L.2.4e
NVACS for Social Studies	None

Grade 2 Computer Science Standards

Data & Analysis

Students who demonstrate understanding can:

Indicator	Standard
2.DA.S.1	Store, copy, search, retrieve, modify, and delete information using a computing device and define the information stored as data.

Practice Connection	Concept Connection
<p>Practice 4. Developing and Using Abstractions <i>2. Evaluate existing technological functionalities and incorporate them into new designs (2.DA.S.1).</i></p>	<p>Data & Analysis</p> <ul style="list-style-type: none"> • DA.S: Storage - <i>Computers store data that can be retrieved later. Identical copies of data can be made and stored in multiple locations for a variety of reasons, such as to protect against loss (2.DA.S.1).</i>

	Connections to other NVACS at this grade level
NVACS for Science	None
NVACS for Mathematics	None
NVACS for ELA	(2.DA.S.1) – W.2.7
NVACS for Social Studies	None

Grade 2 Computer Science Standards

Impacts of Computing

Students who demonstrate understanding can:

Indicator	Standard
2.IC.C.1	Compare how people live and work before and after the implementation or adoption of new computing technology.
2.IC.SLE.1	Identify safe and unsafe examples of online communications.

Practice Connection	Concept Connection
<p>Practice 1. Foster an Inclusive Computing Culture</p> <ol style="list-style-type: none"> 1. Include the unique perspectives of others and reflect on one's own perspectives when designing and developing computational products (2.IC.C.1). 3. Employ self- and peer- advocacy to address bias in interactions, product design, and development methods (2.IC.C.1). <p>Practice 2. Collaborating Around Computing</p> <ol style="list-style-type: none"> 1. Cultivate working relationships with individuals possessing diverse perspectives, skills, and personalities (2.IC.SLE.1). <p>Practice 7. Communicating About Computing</p> <ol style="list-style-type: none"> 3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (2.IC.SLE.1). 	<p>Impacts of Computing</p> <ul style="list-style-type: none"> • IC.C: Culture - <i>Computing technology has positively and negatively changed the way people live and work. Computing devices can be used for entertainment and as productivity tools, and they can affect relationships and lifestyles (2.IC.C.1).</i> • IC.SLE: Safety, Law, and Ethics - <i>People use computing technology in ways that can help or hurt themselves or others. Harmful behaviors, such as sharing private information and interacting with strangers, should be recognized and avoided (2.IC.SLE.1).</i>

NVACS for Social Studies	(2.IC.C.1) – SS.2.22, SS.2.23 (2.IC.SLE.1) – Connection to financial literacy (risk)

Grade 2 Computer Science Standards

Networks and the Internet

Students who demonstrate understanding can:

Indicator	Standard
2.NI.C.1	Explain what passwords are and why we use them; use strong passwords to protect devices and information from unauthorized access.

Practice Connection	Concept Connection
<p>Practice 7. Communicating About Computing 3. <i>Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution</i> (2.NI.C.1).</p>	<p>Networks and the Internet</p> <ul style="list-style-type: none"> NI.C: Cybersecurity - <i>Connecting devices to a network or the Internet provides great benefit, care must be taken to use authentication measures, such as strong passwords, to protect devices and information from unauthorized access</i> (2.NI.C.1).

	Connections to other NVACS at this grade level
NVACS for Science	(2.NI.C.1) – CCC: Cause and Effect
NVACS for Mathematics	SMP 2
NVACS for ELA	(2.NI.C.1) – W.2.2
NVACS for Social Studies	Connect to financial literacy (risk)

Grade 3 Computer Science Standards

Algorithms and Programming

Students who demonstrate understanding can:

Indicator	Standard
3.AP.PD.1	Debug (identify and fix) errors in an algorithm or program that includes sequences and loops.
3.AP.PD.2	Take on varying roles (e.g., researcher, programmer, test developer, designer, recorder) with teacher guidance, when collaborating with peers during the design, implementation, and review stages of program development.
3.AP.V.1	Create programs that use variables to store and modify data.

Practice Connection	Concept Connection
<p>Practice 2. Collaborating Around Computing 2. Create team norms, expectations, and equitable workloads to increase efficiency and effectiveness (3.AP.PD.2).</p> <p>Practice 5. Creating Computational Artifacts 2. Create a computational artifact for practical intent, personal expression, or to address a societal issue (3.AP.V.1).</p> <p>Practice 6. Testing and Refining Computational Artifacts 1. Systematically test computational artifacts by considering all scenarios and using test cases (3.AP.PD.1). 2. Identify and fix errors using a systematic process (3.AP.PD.1).</p>	<p>Algorithms and Programming</p> <ul style="list-style-type: none"> AP.PD: Program Development - People develop programs using an iterative process involving design, implementation, and review. Design often involves reusing existing code or remixing other programs within a community. People continuously review whether programs work as expected, and they fix, or debug, parts that do not. Repeating these steps enables people to refine and improve programs (3.AP.PD.1 and 3.AP.PD.2). AP.V: Variables - Programming languages provide variables, which are used to store and modify data. The data type determines the values and operations that can be performed on that data (3.AP.V.1).

	Connections to other NVACS at this grade level
NVACS for Science	(3.AP.PD.1) – CCC: Cause and Effect, SEP: Asking Questions and Defining Problems, 3-5 ETS1-2: Generate and Compare Multiple Solutions (3.AP.PD.2) – SEP: Planning and Carrying Out Investigations (3.AP.V.1) – CCC: Cause and Effect
NVACS for Mathematics	SMP 3
NVACS for ELA	(3.AP.PD.1) – RI.3.8 (3.AP.PD.2) – W.3.5 (3.AP.V.1) – W.3.5
NVACS for Social Studies	None

Grade 3 Computer Science Standards

Computing Systems

Students who demonstrate understanding can:

Indicator	Standard
3.CS.D.1	Describe how internal and external parts of computing devices function to form a system.

Practice Connection	Concept Connection
<p>Practice 7. Communicating About Computing 2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (3.CS.D.1).</p>	<p>Computing Systems</p> <ul style="list-style-type: none"> CS.D: Devices - Computing devices may be connected to other devices or components to extend their capabilities, such as sensing and sending information. Connections can take many forms, such as physical or wireless. Together, devices and components form a system of interdependent parts that interact for a common purpose (3.CS.D.1).

	Connections to other NVACS at this grade level
NVACS for Science	(3.CS.D.1) – CCC: Systems and System Models, CCC: Structure and Function
NVACS for Mathematics	SMP 2
NVACS for ELA	(3.CS.D.1) – RL.3.5, RI.3.2
NVACS for Social Studies	None

Grade 3 Computer Science Standards

Data and Analysis

Students who demonstrate understanding can:

Indicator	Standard
3.DA.CVT.1	Organize and present collected data visually to highlight relationships and support a claim.

Practice Connection	Concept Connection
<p>Practice 7. Communicating About Computing</p> <p>1. <i>Select, organize, and interpret large data sets from multiple sources to support a claim (3.DA.CVT.1).</i></p>	<p>Data and Analysis</p> <ul style="list-style-type: none"> DA.CVT: Collection, Visualization, and Transformation - People select digital tools for the collection of data based on what is being observed and how the data will be used. For example, a digital thermometer is used to measure temperature and a GPS sensor is used to track locations. <i>People select aspects and subsets of data to be transformed, organized, clustered, and categorized to provide different views and communicate insights gained from the data (3.DA.CVT.1).</i>

	Connections to other NVACS at this grade level
NVACS for Science	SEP: Obtaining, Evaluating, and Communicating data, Engaging in Argumentation from Evidence
NVACS for Mathematics	SMP 2 & 4, 3.MD.B.3
NVACS for ELA	W.3.8, W.3.2a, SL.3.2, SL.3.4, SL.3.5
NVACS for Social Studies	None

Grade 3 Computer Science Standards

Impacts of Computing

Students who demonstrate understanding can:

Indicator	Standard
3.IC.C.1	Discuss computing technologies that have changed the world, and express how those technologies influence and are influenced by cultural practices.
3.IC.SLE.1	Use public domain or creative commons media, and refrain from copying or using material created by others without permission.

Practice Connection	Concept Connection
<p>Practice 3. Recognizing and Defining Computational Problems 1. Identify complex, interdisciplinary, real-world problems that can be solved computationally (3.IC.C.1).</p> <p>Practice 7. Communicating About Computing 3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (3.IC.SLE.1).</p>	<p>Impacts of Computing</p> <ul style="list-style-type: none"> IC.C: Culture - <i>The development and modification of computing technology is driven by people's needs and wants and can affect groups differently. Computing technologies influence, and are influenced by, cultural practices (3.IC.C.1).</i> IC.SLE: Safety, Law, and Ethics - <i>Ethical complications arise from the opportunities provided by computing. The ease of sending and receiving copies of media on the Internet, such as video, photos, and music, creates the opportunity for unauthorized use, such as online piracy, and disregard of copyrights, such as lack of attribution (3.IC.SLE.1).</i>

	Connections to other NVACS at this grade level
NVACS for Science	(3.IC.C.1) – SEP: Obtaining, Communicating, and Evaluating Information, 3-ESS3-1: Influence of engineering, technology and science on society and the natural world) Engineers improve existing technologies or develop new ones to increase their benefits.
NVACS for Mathematics	None

NVACS for Social Studies	Connect to financial literacy (risk)

Grade 4 Computer Science Standards

Algorithms and Programming

Students who demonstrate understanding can:

Indicator	Standard
4.AP.A.1	Test, compare, and refine multiple algorithms for the same task and determine which is the most appropriate.
4.AP.C.1	Develop programs that include sequences, events, loops, and conditionals.
4.AP.M.1	Explore how complex tasks can be decomposed into simple tasks and how simple tasks can be composed into complex tasks.
4.AP.PD.1	Test and debug (identify and fix) errors in a program or algorithm to ensure it runs as intended.

Practice Connection	Concept Connection
<p>Practice 3. Recognizing and Defining Computational Problems</p> <ol style="list-style-type: none"> Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures (4.AP.M.1). Evaluate whether it is appropriate and feasible to solve a problem computationally (4.AP.A.1). <p>Practice 5. Creating Computational Artifacts</p> <ol style="list-style-type: none"> Create a computational artifact for practical intent, personal expression, or to address a societal issue (4.AP.C.1). <p>Practice 6. Testing and Refining Computational Artifacts</p> <ol style="list-style-type: none"> Systematically test computational artifacts by considering all scenarios and using test cases (4.AP.A.1 and 4.AP.PD.1). Identify and fix errors using a systematic process (4.AP.A.1 and 4.AP.PD.1). Evaluate and refine a computational artifact multiple times to enhance its performance, reliability, usability, and accessibility (4.AP.A.1). 	<p>Algorithms and Programming</p> <ul style="list-style-type: none"> AP.A: Algorithms - <i>Different algorithms can achieve the same result. Some algorithms are more appropriate for a specific context than others (4.AP.A.1).</i> AP.C: Control - <i>Control structures, including loops, event handlers, and conditionals, are used to specify the flow of execution. Conditionals selectively execute or skip instructions under different conditions (4.AP.C.1).</i> AP.M: Modularity - <i>Programs can be broken down into smaller parts to facilitate their design, implementation, and review. Programs can also be created by incorporating smaller portions of programs that have already been created (4.AP.M.1).</i> AP.PD: Program Development - <i>People develop programs using an iterative process involving design, implementation, and review. Design often involves reusing existing code or remixing other programs within a community. People continuously review whether programs work as expected, and they fix, or debug, parts that do not. Repeating these steps enables people to refine and improve programs (4.AP.PD.1).</i>

	Connections to other NVACS at this grade level
NVACS for Science	(4.AP.A.1) – 3-5 ETS1-2: Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem, 3-5 ETS1-3: Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved, SEP: Analyzing and Interpreting Data (4.AP.C.1) – SEP: Developing and Using Models, CCC: Patterns (4.AP.M.1) – SEP: Developing and Using Models, CCC: Systems and System Models (4.AP.PD.1) – 3-5 ETS1-3: Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved, SEP: Constructing Explanations and Designing Solutions

Grades 6-8 Computer Science Standards

Algorithms and Programming

By the end of Grade 8, students who demonstrate understanding can:

Indicator	Standard
6-8.AP.A.1	Use flowcharts and/or pseudocode to address complex problems as algorithms.
6-8.AP.V.1	Create clearly named variables that represent different data types and perform operations on their values.
6-8.AP.C.1	Design and iteratively develop programs that combine control structures, including nested loops and compound conditionals.
6-8.AP.M.1	Decompose problems and subproblems into parts to facilitate the design, implementation, and review of programs.
6-8.AP.M.2	Create procedures with parameters to organize code and make it easier to reuse.
6-8.AP.PD.1	Design meaningful solutions for others, incorporating data from collaborative team members and the end user, to meet the end user's needs.
6-8.AP.PD.2	Incorporate existing code, media, and libraries into original programs, and give attribution.
6-8.AP.PD.3	Systematically test and refine programs using a range of test cases.
6-8.AP.PD.4	Distribute tasks and maintain a project timeline when collaboratively developing computational artifacts.
6-8.AP.PD.5	Document programs (throughout the design, development, troubleshooting, and user experience phases) in order to make them easier to follow, test, and debug by others.

Practice Connection	Concept Connection
<p>Practice 1. Fostering an Inclusive Computing Culture</p> <ol style="list-style-type: none"> 1. Include the unique perspectives of others and reflect on one's own perspectives when designing and developing computational products (6-8.AP.PD.1). <p>Practice 2. Collaborating Around Computing</p> <ol style="list-style-type: none"> 2. Create team norms, expectations, and equitable workloads to increase efficiency and effectiveness (6-8.AP.PD.4). 3. Solicit and incorporate feedback from, and provide constructive feedback to, team members and other stakeholders (6-8.AP.PD.1). <p>Practice 3. Recognizing and Defining Computational Problems</p> <ol style="list-style-type: none"> 2. Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures (6-8.AP.M.1). <p>Practice 4. Developing and Using Abstractions</p> <ol style="list-style-type: none"> 1. Extract common features from a set of interrelated processes or complex phenomena (6-8.AP.A.1 and 6-8.AP.M.2). 2. Evaluate existing technological functionalities and incorporate them into new designs (6-8.AP.PD.2). 3. Create modules and develop points of interaction that can apply to multiple situations and reduce complexity (6-8.AP.M.2). 4. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes (6-8.AP.A.1). <p>Practice 5. Creating Computational Artifacts</p> <ol style="list-style-type: none"> 1. Plan the development of a computational artifact using an iterative process that includes reflection on and modification of the plan, taking into account key features, time and resource constraints, and user expectations (6-8.AP.V.1 and 6-8.AP.C.1). 2. Create a computational artifact for practical intent, personal expression, or to address a societal issue (6-8.AP.V.1, 6-8.AP.C.1, and 6-8.AP.PD.2). <p>Practice 6. Testing and Refining Computational Artifacts</p> <ol style="list-style-type: none"> 1. Systematically test computational artifacts by considering all scenarios and using test cases (6-8.AP.PD.3). <p>Practice 7. Communicating About Computing</p> <ol style="list-style-type: none"> 2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (6-8.AP.PD.5). 3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (6-8.AP.PD.2). 	<p>Algorithms and Programming</p> <ul style="list-style-type: none"> ● AP.A: Algorithms - Algorithms affect how people interact with computers and the way computers respond. People design algorithms that are generalizable to many situations. Algorithms that are readable are easier to follow, test, and debug (6-8.AP.A.1). ● AP.V: Variables - Programmers create variables to store data values of selected types. A meaningful identifier is assigned to each variable to access and perform operations on the value by name. Variables enable the flexibility to represent different situations, process different sets of data, and produce varying outputs (6-8.AP.V.1). ● AP.C: Control - Programmers select and combine control structures, such as loops, event handlers, and conditionals, to create more complex program behavior (6-8.AP.C.1). ● AP.M: Modularity - Programs use procedures to organize code, hide implementation details, and make code easier to reuse. Procedures can be repurposed in new programs. Defining parameters for procedures can generalize behavior and increase reusability (6-8.AP.M.1 and 6-8.AP.M.2). ● AP.PD: Program Development - People design meaningful solutions for others by defining a problem's criteria and constraints, carefully considering the diverse needs and wants of the community, and testing whether criteria and constraints were met (6-8.AP.PD.1-5).

Grades 6-8 Computer Science Standards

Computing Systems

By the end of Grade 8, students who demonstrate understanding can:

Indicator	Standard
6-8.CS.D.1	Recommend improvements to the design of computing devices based on an analysis of how users interact with the devices, noting that advantages may have disadvantages and unintended consequences.
6-8.CS.HS.1	Design and evaluate projects that combine hardware and software components to collect and exchange data.
6-8.CS.T.1	Systematically identify and fix problems with computing devices and their components.

Practice Connection	Concept Connection
<p>Practice 3. Recognizing and Defining Computational Problems 3. Evaluate whether it is appropriate and feasible to solve a problem computationally (6-8.CS.D.1).</p> <p>Practice 5. Creating Computational Artifacts 1. Plan the development of a computational artifact using an iterative process that includes reflection on and modification of the plan, taking into account key features, time and resource constraints, and user expectations (6-8.CS.HS.1).</p> <p>Practice 6. Testing and Refining Computational Artifacts 2. Identify and fix errors using a systematic process (6-8.CS.T.1).</p>	<p>Computing Systems</p> <ul style="list-style-type: none"> CS.D: Devices - <i>The interaction between humans and computing devices presents advantages, disadvantages, and unintended consequences. The study of human-computer interaction can improve the design of devices and extend the abilities of humans (6-8.CS.D.1).</i> CS.HS: Hardware and Software - <i>Hardware and software determine a computing system's capability to store and process information. The design or selection of a computing system involves multiple considerations and potential tradeoffs, such as functionality, cost, size, speed, accessibility, and aesthetics (6-8.CS.HS.1).</i> CS.T: Troubleshooting - <i>Comprehensive troubleshooting requires knowledge of how computing devices and components work and interact. A systematic process will identify the source of a problem whether within a device or in a larger system of connected devices (6-8.CS.T.1).</i>

Grades 6-8 Computer Science Standards

Data and Analysis

By the end of Grade 8, students who demonstrate understanding can:

Indicator	Standard
6-8.DA.S.1	Model encoding schema used by software tools to access data, stored as bits, into forms more easily understood by people (e.g., encoding schema include binary and ASCII).
6-8.DA.CVT.1	Collect data using computational tools and transform the data to make it more meaningful and useful.
6-8.DA.IM.1	Refine computational models based on the reliability and validity of the data they generate.

Practice Connection	Concept Connection
<p>Practice 4. Developing and Using Abstractions</p> <ol style="list-style-type: none"> 1. Extract common features from a set of interrelated processes or complex phenomena (6-8.DA.S.1). 4. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes (6-8.DA.S.1 and 6-8.DA.IM.1). <p>Practice 5. Creating Computational Artifacts</p> <ol style="list-style-type: none"> 3. Modify an existing artifact to improve or customize it (6-8.DA.IM.1). <p>Practice 6. Testing and Refining Computational Artifacts</p> <ol style="list-style-type: none"> 3. Evaluate and refine a computational artifact multiple times to enhance its performance, reliability, usability, and accessibility (6-8.DA.CVT.1). 	<p>Data and Analysis</p> <ul style="list-style-type: none"> • DA.S: Storage - Applications store data as a representation. Representations occur at multiple levels, from the arrangement of information into organized formats (such as tables in software) to the physical storage of bits. The software tools used to access information translate the low-level representation of bits into a form understandable by people (6-8.DA.S.1). • DA.CVT: Collection, Visualization and Transformation - People design algorithms and tools to automate the collection of data by computers. When data collection is automated, data is sampled and converted into a form that a computer can process. For example, data from an analog sensor must be converted into a digital form. The method used to automate data collection is influenced by the availability of tools and the intended use of the data. Data can be transformed to remove errors, highlight or expose relationships, and/or make it easier for computers to process (6-8.DA.CVT.1). • DA.IM: Inference and Models - Computer models can be used to simulate events, examine theories and inferences, or make predictions with either few or millions of data points. Computer models are abstractions that represent phenomena and use data and algorithms to emphasize key features and relationships within a system. As more data is automatically collected, models can be refined (6-8.DA.IM.1).

Grades 6-8 Computer Science Standards

Impacts of Computing

By the end of Grade 8, students who demonstrate understanding can:

Indicator	Standard
6-8.IC.C.1	Compare tradeoffs associated with computing technologies that affect people's everyday activities and career options.
6-8.IC.C.2	Discuss and evaluate issues of bias and accessibility in the design of existing technologies.
6-8.IC.SI.1	Collaborate with many contributors through strategies such as crowdsourcing or surveys when creating a computational artifact.
6-8.IC.SLE.1	Identify risks associated with sharing information digitally (e.g., phishing, identity theft, hacking).
6-8.IC.SLE.2	Evaluate how legal and ethical issues shape computing practices.

Practice Connection	Concept Connection
<p>Practice 1. Fostering an Inclusive Computing Culture 2. Address the needs of diverse end users during the design process to produce artifacts with broad accessibility and usability (6-8.IC.C.2).</p> <p>Practice 2. Collaborating Around Computing 4. Evaluate and select technological tools that can be used to collaborate on a project (6-8.IC.SI.1).</p> <p>Practice 5. Creating Computational Artifacts 2. Create a computational artifact for practical intent, personal expression, or to address a societal issue (6-8.IC.SI.1).</p> <p>Practice 7. Communicating About Computing 2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (6-8.IC.C.1 and 6-8.IC.SLE.1). 3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (6-8.IC.SLE.2).</p>	<p>Impacts of Computing</p> <ul style="list-style-type: none"> IC.C: Culture - <i>Advancements in computing technology change people's everyday activities. Society is faced with tradeoffs due to the increasing globalization and automation that computing brings (6-8.IC.C.1 and 6-8.IC.C.2).</i> IC.SI: Social Interactions - <i>People can organize and engage around issues and topics of interest through various communication platforms enabled by computing, such as social networks and media outlets. These interactions allow issues to be examined using multiple viewpoints from a diverse audience (6-8.IC.SI.1).</i> IC.SLE: Safety, Law and Ethics - <i>There are tradeoffs between allowing information to be public and keeping information private and secure. People can be tricked into revealing personal information when more public information is available about them online (6-8.IC.SLE.1 and 6-8.IC.SLE.2).</i>

Grades 9-12 Computer Science Standards

Algorithms and Programming

By the end of Grade 12, students who demonstrate understanding can:

Indicator	Standard
9-12.AP.A.1	Create prototypes that use algorithms to solve computational problems by leveraging prior student knowledge and personal interests.
9-12.AP.V.1	Demonstrate the use of both linked lists and arrays to simplify solutions, generalizing computational problems instead of repeatedly using simple variables.
9-12.AP.C.1	Justify the selection of specific control structures when tradeoffs involve implementation, readability, and program performance, and explain the benefits and drawbacks of choices made.
9-12.AP.C.2	Design and iteratively develop computational artifacts for practical intent, personal expression, or to address a societal issue by using events to initiate instructions.
9-12.AP.M.1	Decompose problems into smaller components through systematic analysis, using constructs such as procedures, modules, and/or objects.
9-12.AP.M.2	Create artifacts by using procedures within a program, combinations of data and procedures, or independent but interrelated programs.
9-12.AP.PD.1	Systematically design and develop programs for broad audiences by incorporating feedback from users.
9-12.AP.PD.2	Evaluate licenses that limit or restrict use of computational artifacts when using resources such as libraries.
9-12.AP.PD.3	Evaluate and refine computational artifacts to make them more usable by all and accessible to people with disabilities.
9-12.AP.PD.4	Design and develop computational artifacts working in team roles using collaborative tools.
9-12.AP.PD.5	Document design decisions using text, graphics, presentations, and/or demonstrations in the development of complex programs.

Practice Connection	Concept Connection
<p>Practice 2. Collaborating Around Computing 4. Evaluate and select technological tools that can be used to collaborate on a project (9-12.AP.PD.4).</p> <p>Practice 3. Recognizing and Defining Computational Problems 2. Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures (9-12.AP.C.1 and 9-12.AP.M.1).</p> <p>Practice 4. Developing and Using Abstractions 1. Extract common features from a set of interrelated processes or complex phenomena (9-12.AP.V.1).</p> <p>Practice 5. Creating Computational Artifacts 1. Plan the development of a computational artifact using an iterative process that includes reflection on and modification of the plan, taking into account key features, time and resource constraints, and user expectations (9-12.AP.PD.1). 2. Create a computational artifact for practical intent, personal expression, or to address a societal issue (9-12.AP.A.1, 9-12.AP.C.1-2, and 9-12.AP.M.2).</p> <p>Practice 6. Testing and Refining Computational Artifacts 3. Evaluate and refine a computational artifact multiple times to enhance its performance, reliability, usability, and accessibility (9-12.AP.PD.3).</p> <p>Practice 7. Communicating About Computing 2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (9-12.AP.PD.5). 3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (9-12.AP.PD.2).</p>	<p>Algorithms and Programming</p> <ul style="list-style-type: none"> ● AP.A: Algorithms - People evaluate and select algorithms based on performance, reusability, and ease of implementation. Knowledge of common algorithms improves how people develop software, secure data, and store information (9-12.AP.A.1). ● AP.V: Variables - Data structures are used to manage program complexity. Programmers choose data structures based on functionality, storage, and performance tradeoffs (9-12.AP.V.1). ● AP.C: Control - Programmers consider tradeoffs related to implementation, readability, and program performance when selecting and combining control structures (9-12.AP.C.1 and 9-12.AP.C.2). ● AP.M: Modularity - Complex programs are designed as systems of interacting modules, each with a specific role, coordinating for a common overall purpose. These modules can be procedures within a program; combinations of data and procedures; or independent, but interrelated, programs. Modules allow for better management of complex tasks (9-12.AP.M.1 and 9-12.AP.M.2). ● AP.PD: Program Development - Diverse teams can develop programs with a broad impact through careful review and by drawing on the strengths of members in different roles. Design decisions often involve tradeoffs. The development of complex programs is aided by resources such as libraries and tools to edit and manage parts of the program. Systematic analysis is critical for identifying the effects of lingering bugs (9-12.AP.PD.1-5).

NVACS for Social Studies	None

Grades 9-12 Computer Science Standards

Computing Systems

By the end of Grade 12, students who demonstrate understanding can:

Indicator	Standard
9-12.CS.D.1	Explain how abstractions hide the underlying implementation details of computing systems embedded in everyday objects.
9-12.CS.HS.1	Compare levels of abstraction and interactions between application software, system software, and hardware layers.
9-12.CS.T.1	Develop guidelines that convey systematic troubleshooting strategies that others can use to identify and fix errors.

Practice Connection	Concept Connection
<p>Practice 4. Developing and Using Abstractions 1. Extract common features from a set of interrelated processes or complex phenomena (9-12.CS.D.1 and 9-12.CS.HS.1).</p> <p>Practice 6. Testing and Refining Computational Artifacts 2. Identify and fix errors using a systematic process (9-12.CS.T.1).</p>	<p>Computing Systems</p> <ul style="list-style-type: none"> CS.D: Devices - Computing devices are often integrated with other systems, including biological, mechanical, and social systems. These devices can share data with one another. The usability, dependability, security, and accessibility of these devices, and the systems they are integrated with, are important considerations in their design as they evolve (9-12.CS.D.1). CS.HS: Hardware and Software - Levels of interaction exist between the hardware, software, and user of a computing system. The most common levels of software that a user interacts with include system software and applications. System software controls the flow of information between hardware components used for input, output, storage, and processing (9-12.CS.HS.1). CS.T: Troubleshooting - Troubleshooting complex problems involves the use of multiple sources when researching, evaluating, and implementing potential solutions. Troubleshooting also relies on experience, such as when people recognize that a problem is similar to one they have seen before or adapt solutions that have worked in the past (9-12.CS.T.1).

Grades 9-12 Computer Science Standards

Data and Analysis

By the end of Grade 12, students who demonstrate understanding can:

Indicator	Standard
9-12.DA.S.1	Translate between different bit representations of real-world phenomena, such as characters, numbers, and images (e.g., convert hexadecimal colors to decimal percentages, ASCII/Unicode representation).
9-12.DA.S.2	Evaluate the tradeoffs in how data elements are organized and where data is stored.
9-12.DA.CVT.1	Create interactive data visualizations or alternative representations using software tools to help others better understand real-world phenomena.
9-12.DA.IM.1	Create computational models that represent the relationships among different elements of data collected from a phenomenon, process, or model.

Practice Connection	Concept Connection
<p>Practice 3. Recognizing and Defining Computational Problems</p> <p>3. Evaluate whether it is appropriate and feasible to solve a problem computationally (9-12.DA.S.2).</p> <p>Practice 4. Developing and Using Abstractions</p> <p>1. Extract common features from a set of interrelated processes or complex phenomena (9-12.DA.S.1).</p> <p>4. Model phenomena and processes and simulate systems to understand and evaluate potential outcomes (9-12.DA.CVT.1 and 9-12.DA.IM.1).</p>	<p>Data and Analysis</p> <ul style="list-style-type: none"> DA.S: Storage - <i>Data can be composed of multiple data elements that relate to one another. For example, population data may contain information about age, gender, and height. People make choices about how data elements are organized and where data is stored. These choices affect cost, speed, reliability, accessibility, privacy, and integrity (9-12.DA.S.1 and 9-12.DA.S.2).</i> DA.CVT: Collection, Visualization and Transformation - <i>Data is constantly collected or generated through automated processes that are not always evident, raising privacy concerns. The different collection methods and tools that are used influence the amount and quality of the data that is observed and recorded. People transform, generalize, simplify, and present large data sets in different ways to influence how other people interpret and understand the underlying information. Examples include visualization, aggregation, rearrangement, and application of mathematical operations (9-12.DA.CVT.1).</i> DA.IM: Inference and Models - <i>The accuracy of predictions or inferences depends upon the limitations of the computer model and the data the model is built upon. The amount, quality, and diversity of data and the features chosen can affect the quality of a model and ability to understand a system. Predictions or inferences are tested to validate models. (9-12.DA.IM.1).</i>

Grades 9-12 Computer Science Standards

Impacts of Computing

By the end of Grade 12, students who demonstrate understanding can:

Indicator	Standard
9-12.IC.C.1	Evaluate the ways computing impacts personal, ethical, social, economic, and cultural practices.
9-12.IC.C.2	Test and refine computational artifacts to reduce bias and equity deficits.
9-12.IC.C.3	Demonstrate ways a given algorithm applies to problems across disciplines.
9-12.IC.C.4	Explain the potential impacts of artificial intelligence on society.
9-12.IC.SI.1	Use tools and methods for collaboration on a project to increase connectivity of people in different cultures and career fields.
9-12.IC.SLE.1	Explain the beneficial and harmful effects that intellectual property laws can have on innovation.
9-12.IC.SLE.2	Explain the privacy concerns related to the collection and generation of data through automated processes that may not be evident to users.
9-12.IC.SLE.3	Evaluate the social and economic implications of privacy in the context of safety, law, or ethics.

Practice Connection	Concept Connection
<p>Practice 1. Fostering an Inclusive Computing Culture</p> <ol style="list-style-type: none"> 1. Include the unique perspectives of others and reflect on one's own perspectives when designing and developing computational products (9-12.IC.C.4). 2. Address the needs of diverse end users during the design process to produce artifacts with broad accessibility and usability (9-12.IC.C.1 and 9-12.IC.C.2). <p>Practice 2. Collaborating Around Computing</p> <ol style="list-style-type: none"> 4. Evaluate and select technological tools that can be used to collaborate on a project (9-12.IC.SI.1). <p>Practice 3. Recognizing and Defining Computational Problems</p> <ol style="list-style-type: none"> 1. Identify complex, interdisciplinary, real-world problems that can be solved computationally (9-12.IC.C.3). <p>Practice 7. Communicating About Computing</p> <ol style="list-style-type: none"> 2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (9-12.IC.SLE.2). 3. Articulate ideas responsibly by observing intellectual property rights and giving appropriate attribution (9-12.IC.SLE.1 and 9-12.IC.SLE.3). 	<p>Impacts of Computing</p> <ul style="list-style-type: none"> ● IC.C: Culture - <i>The design and use of computing technologies and artifacts can improve, worsen, or maintain inequitable access to information and opportunities (9-12.IC.C.1-4).</i> ● IC.SI: Social Interactions - <i>Many aspects of society, especially careers, have been affected by the degree of communication afforded by computing. The increased connectivity between people in different cultures and in different career fields has changed the nature and content of many careers (9-12.IC.SI.1).</i> ● IC.SLE: Safety, Law and Ethics - <i>Laws govern many aspects of computing, such as privacy, data, property, information, and identity. These laws can have beneficial and harmful effects, such as expediting or delaying advancements in computing and protecting or infringing upon people's rights. International differences in laws and ethics have implications for computing (9-12.IC.SLE.1-3).</i>

Grades 9-12 Computer Science Standards

Networks and the Internet

By the end of Grade 12, students who demonstrate understanding can:

Indicator	Standard
9-12.NI.NCO.1	Evaluate the scalability and reliability of networks, by describing the relationship between routers, switches, servers, topology, and addressing.
9-12.NI.C.1	Give examples to illustrate how sensitive data can be affected by malware and other attacks.
9-12.NI.C.2	Recommend security measures to address various scenarios based on factors such as efficiency, feasibility, and ethical impacts.
9-12.NI.C.3	Compare various security measures, considering tradeoffs between the usability and security of a computing system.
9-12.NI.C.4	Explain tradeoffs when selecting and implementing cybersecurity recommendations.

Practice Connection	Concept Connection
<p>Practice 3. Recognizing and Defining Computational Problems <i>3. Evaluate whether it is appropriate and feasible to solve a problem computationally (9-12.NI.C.2).</i></p> <p>Practice 4. Developing and Using Abstractions <i>1. Extract common features from a set of interrelated processes or complex phenomena (9-12.NI.NCO.1).</i></p> <p>Practice 6. Testing and Refining Computational Artifacts <i>3. Evaluate and refine a computational artifact multiple times to enhance its performance, reliability, usability, and accessibility (9-12.NI.C.3).</i></p> <p>Practice 7. Communicating About Computing <i>2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (9-12.NI.C.1 and 9-12.NI.C.4).</i></p>	<p>Networks and the Internet</p> <ul style="list-style-type: none"> • NI.NCO: Network, Communication, and Organization - <i>Network topology is determined, in part, by how many devices can be supported. Each device is assigned an address that uniquely identifies it on the network. The scalability and reliability of the Internet are enabled by the hierarchy and redundancy in networks (9-12.NI.NCO.1).</i> • NI.C: Cybersecurity - <i>Network security depends on a combination of hardware, software, and practices that control access to data and systems. The needs of users and the sensitivity of data determine the level of security implemented (9-12.NI.C.1-4).</i>

Grades 9-12 Advanced* Computer Science Standards

Algorithms and Programming

** These Advanced Computer Science Standards are considered to be higher level concepts that may be used by your advanced students, incorporated into upper level courses, and/or used in Career and Technical Education (CTE) programs. These are in addition to the 9-12 Computer Science Standards and are optional.*

By the end of Grade 12, students who demonstrate understanding can:

Indicator	Standard
A9-12.AP.A.1	Describe how artificial intelligence drives many software and physical systems.
A9-12.AP.A.2	Implement an artificial intelligence algorithm to play a game against a human opponent or solve a problem.
A9-12.AP.A.3	Use and adapt classic algorithms to solve computational problems.
A9-12.AP.A.4	Evaluate algorithms in terms of their efficiency, correctness, and clarity.
A9-12.AP.V.1	Compare and contrast fundamental data structures and their uses.
A9-12.AP.C.1	Illustrate the flow of execution of a recursive algorithm.
A9-12.AP.M.1	Construct solutions to problems using student-created components, such as procedures, modules and/or objects.
A9-12.AP.M.2	Analyze a large-scale computational problem and identify generalizable patterns that can be applied to a solution.
A9-12.AP.M.3	Demonstrate code reuse by creating programming solutions using libraries and APIs.
A9-12.AP.PD.1	Plan and develop programs for broad audiences using a software life cycle process.
A9-12.AP.PD.2	Explain security issues that might lead to compromised computer programs.
A9-12.AP.PD.3	Develop programs for multiple computing platforms.
A9-12.AP.PD.4	Use version control systems, integrated development environments (IDEs), and collaborative tools and practices (code documentation) in a group software project.
A9-12.AP.PD.5	Develop and use a series of test cases to verify that a program performs according to its design specifications.
A9-12.AP.PD.6	Modify an existing program to add additional functionality and discuss intended and unintended implications (e.g., breaking other functionality).
A9-12.AP.PD.7	Evaluate key qualities of a program through a process such as a code review.

A9-12.AP.PD.8	Compare multiple programming languages and discuss how their features make them suitable for solving different types of problems.
---------------	---

Practice Connection	Concept Connection
<p>Practice 2. Collaborating Around Computing <i>4. Evaluate and select technological tools that can be used to collaborate on a project (A9-12.AP.PD.4).</i></p> <p>Practice 3. Recognizing and Defining Computational Problems <i>2. Decompose complex real-world problems into manageable subproblems that could integrate existing solutions or procedures (A9-12.AP.C.1).</i></p> <p>Practice 4. Developing and Using Abstractions <i>1. Extract common features from a set of interrelated processes or complex phenomena (A9-12.AP.M.2).</i> <i>2. Evaluate existing technological functionalities and incorporate them into new designs (A9-12.AP.A.3-4 and A9-12.AP.V.1).</i></p> <p>Practice 5. Creating Computational Artifacts <i>1. Plan the development of a computational artifact using an iterative process that includes reflection on and modification of the plan, taking into account key features, time and resource constraints, and user expectations (A9-12.AP.PD.1).</i> <i>2. Create a computational artifact for practical intent, personal expression, or to address a societal issue (A9-12.AP.M.1 and A9-12.AP.PD.3).</i> <i>3. Modify an existing artifact to improve or customize it (A9-12.AP.A.2, A9-12.AP.M.3, and A9-12.AP.PD.6).</i></p> <p>Practice 6. Testing and Refining Computational Artifacts <i>1. Systematically test computational artifacts by considering all scenarios and using test cases (A9-12.AP.PD.5).</i> <i>3. Evaluate and refine a computational artifact multiple times to enhance its performance, reliability, usability, and accessibility (A9-12.AP.PD.7).</i></p> <p>Practice 7. Communicating About Computing <i>2. Describe, justify, and document computational processes and solutions using appropriate terminology consistent with the intended audience and purpose (A9-12.AP.A.1, A9-12.AP.PD.2 and A9-12.AP.PD.8).</i></p>	<p>Algorithms and Programming</p> <ul style="list-style-type: none"> ● AP.A: Algorithms - <i>People evaluate and select algorithms based on performance, reusability, and ease of implementation. Knowledge of common algorithms improves how people develop software, secure data, and store information (A9-12.AP.A.1-4).</i> ● AP.V: Variables - <i>Data structures are used to manage program complexity. Programmers choose data structures based on functionality, storage, and performance tradeoffs (A9-12.AP.V.1).</i> ● AP.C: Control - <i>Programmers consider tradeoffs related to implementation, readability, and program performance when selecting and combining control structures (A9-12.AP.C.1).</i> ● AP.M: Modularity - <i>Complex programs are designed as systems of interacting modules, each with a specific role, coordinating for a common overall purpose. These modules can be procedures within a program; combinations of data and procedures; or independent, but interrelated, programs. Modules allow for better management of complex tasks (A9-12.AP.M.1-3).</i> ● AP.PD: Program Development - <i>Diverse teams can develop programs with a broad impact through careful review and by drawing on the strengths of members in different roles. Design decisions often involve tradeoffs. The development of complex programs is aided by resources such as libraries and tools to edit and manage parts of the program. Systematic analysis is critical for identifying the effects of lingering bugs (A9-12.AP.PD.1-8).</i>

Glossary

This glossary includes terms used within the standards and are provided to help individuals understand the content. These definitions may or may not be given to the students as written.

abstraction—[1] (process) the process of reducing complexity by focusing on the main idea; hiding details irrelevant to the question at hand and bringing together related and useful details; reduces complexity and allows one to focus on the problem; [2] (product) a new representation of a thing, a system, or a problem that helpfully reframes a problem by hiding details irrelevant to the question at hand

accessibility—the design of products, devices, services, or environments for people who experience disabilities and generally accepted by professional groups, such as the Web Content Accessibility Guidelines (WCAG) 2.0 and Accessible Rich Internet Applications (ARIA) standards

algorithm—a step-by-step process to complete a task

analog—the defining characteristic of data that is represented in a continuous, physical way; whereas digital data is a set of individual symbols, analog data is stored in physical media, such as the surface grooves on a vinyl record, the magnetic tape of a VCR cassette, or other non-digital media

app—a type of application software designed to run on a mobile device, such as a smartphone or tablet computer; also known as a mobile application

artifact—anything created by a human (see computational artifact)

audience—expected end users of a computational artifact or system

authentication—the verification of the identity of a person or process

automate—to link disparate systems and software so that they become self-regulating

automation—the process of automating

Boolean—a type of data or expression with two possible values: true and false

bug—an error in a software program that may cause a program to unexpectedly quit or behave in an unintended manner

code—any set of instructions expressed in a programming language

comment—a programmer-readable annotation in the code of a computer program added to make the code easier to understand and generally ignored by machines

complexity—the minimum amount of resources, such as memory, time, or messages, needed to solve a problem or execute an algorithm

component—an element of a larger group; usually provides a particular service or group of related services

computational—relating to computers or computing methods

computational artifact—anything created by a human using a computational thinking process and a computing device including but not limited to, a program, image, audio, video, presentation, or web page file

computational thinking—the human ability to formulate problems so that their solutions can be represented as computational steps or algorithms to be executed by a computer

computer—a machine or device that performs processes, calculations, and operations based on instructions provided by a software or hardware program

Glossary

- computer science**—the study of computers and algorithmic processes, including their principles, their hardware and software designs, their implementation, and their impact on society
- computing**—any goal-oriented activity requiring, benefiting from, or creating algorithmic processes
- computing device**—a physical device that uses hardware and software to receive, process, and output information, such as computers, mobile phones, and computer chips inside appliances
- computing system**—a collection of one or more computers or computing devices, together with their hardware and software, integrated for the purpose of accomplishing shared tasks (although a computing system can be limited to a single computer or computing device, it more commonly refers to a collection of multiple connected computers, computing devices, and hardware)
- conditional**—a feature of a programming language that performs different computations or actions depending on whether a programmer-specified Boolean condition evaluates to true or false and could refer to a conditional statement, conditional expression, or conditional construct
- configuration**—[1] (process) defining the options that are provided when installing or modifying hardware and software or the process of creating the configuration; [2] (product) the specific hardware and software details that tell exactly what the system is made up of, especially in terms of devices attached, capacity, or capability
- connection**—a physical or wireless attachment between multiple computing systems, computers, or computing devices
- connectivity**—a program’s or device’s ability to link with other programs and devices
- control**—the general power to direct the course of actions; in programming, the use of elements of programming code to direct which actions take place and the order in which they take place
- control structure**—a programming (code) structure that implements control, such as conditionals and loops
- crowdsourcing**—gathering services, ideas, or content from a large group of people, especially from the online community at the local level (e.g. classroom or school) or global level (e.g. age-appropriate online communities, like Scratch and Minecraft)
- culture**—a human institution manifested in the learned behavior of people, including their specific belief systems, language(s), social relations, technologies, institutions, organizations, and systems for using and developing resources
- cultural practices**—the displays and behaviors of a culture
- cybersecurity**—the protection against access to, or alteration of, computing resources through the use of technology, processes, and training
- data**—information that is collected and used for reference or analysis; digital or nondigital information, including numbers, text, show of hands, images, sounds, or video
- data structure**—a particular way to store and organize data within a computer program to suit a specific purpose so that it can be accessed and worked with in appropriate ways

Glossary

- data type**—a classification of data that is distinguished by its attributes and the types of operations that can be performed on it, such as integer, string, Boolean (true or false), and floating-point
- debugging**—the process of finding and correcting errors (bugs) in programs
- decompose**—to break down into components
- decomposition**—breaking down a problem or system into components
- device**—A unit of physical hardware that provides one or more computing functions within a computing system that can provide input to the computer, accept output, or both
- digital**—a characteristic of electronic technology that uses discrete values, generally 0 and 1, to generate, store, and process data
- digital citizenship**—the norms of appropriate, responsible behavior with regard to the use of technology
- efficiency**—a measure of the amount of resources an algorithm uses to find an answer, usually expressed in terms of the theoretical computations, the memory used, the number of messages passed, the number of disk accesses, etc.
- encapsulation**—the technique of combining data and the procedures that act on it to create a type
- encryption**—the conversion of electronic data into another form, called ciphertext, which cannot be easily understood by anyone except authorized parties
- end user**—a person for whom a hardware or software product is designed (as distinguished from the developers)
- event**—any identifiable occurrence that has significance for system hardware or software; user-generated events include keystrokes and mouse clicks; system-generated events include program loading and errors
- event handler**—a procedure that specifies what should happen when a specific event occurs
- execute**—to carry out (or “run”) an instruction or set of instructions (e.g., program, app)
- execution**—the process of executing an instruction or set of instructions
- hardware**—the physical components that make up a computing system, computer, or computing device
- hierarchy**—an organizational structure in which items are ranked according to levels of importance
- human-computer interaction (HCI)** —the study of how people interact with computers and to what extent computing systems are or are not developed for successful interaction with human beings
- identifier**—the user-defined, unique name of a program element (such as a variable or procedure) in code; an identifier name should indicate the meaning and usage of the element being named
- implementation**—the process of expressing the design of a solution in a programming language (code) that can be made to run on a computing device
- inference**—a conclusion reached on the basis of evidence and reasoning
- input**—the signals or instructions sent to a computer
- integrity**—the overall completeness, accuracy, and consistency of data

Glossary

- internet**—the global collection of computer networks and their connections, all using shared protocols to communicate
- iterative**—involving the repeating of a process with the aim of approaching a desired goal, target, or result
- linked list**—a list in which each item contains both data and a pointer to one or both neighboring items, thus eliminating the need for the data items to be ordered in memory
- loop**—a programming structure that repeats a sequence of instructions as long as a specific condition is true
- memory**—temporary storage used by computing devices
- model**—a representation of some part of a problem or a system (this definition differs from that used in science)
- modularity**—the characteristic of a software/web application that has been divided (decomposed) into smaller modules that might have several procedures that are called from inside its main procedure and existing procedures could be reused by recombining them in a new application
- module**—a software component or part of a program that contains one or more procedures; one or more independently developed modules make up a program
- network**—a group of computing devices (personal computers, phones, servers, switches, routers, etc.) connected by cables or wireless media for the exchange of information and resources
- operation**—an action, resulting from a single instruction, that changes the state of data
- output**—a place where power or information leaves a system
- packet**—the unit of data sent over a network
- parameter**—a special kind of variable used in a procedure to refer to one of the pieces of data received as input by the procedure
- phenomenon**—(*pl* phenomena) a fact, occurrence, or circumstance observed or observable
- piracy**—the illegal copying, distribution, or use of software
- procedure**—an independent code module that fulfills some concrete task and is referenced within a larger body of program code; the fundamental role of offering a single point of reference for some small goal or task that the developer or programmer can trigger by invoking the procedure itself (in these standards, procedure is used as a general term that may refer to an actual procedure or a method, function, or module of any other name by which modules are known in other programming languages)
- process**—a series of actions or steps taken to achieve a particular outcome
- program**—(n) a set of instructions that the computer executes to achieve a particular objective; (v) to produce a program by programming
- programming**—the craft of analyzing problems and designing, writing, testing, and maintaining programs to solve them
- protocol**—the special set of rules used by endpoints in a telecommunication connection when they communicate, specifying interactions between the communicating entities
- prototype**—an early approximation of a final product or information system, often built for demonstration purposes

Glossary

- pseudocode**—computing instructions written in symbolic code which must be translated into a program language before they can be executed
- redundancy**—a system design in which a component is duplicated, so if it fails, there will be a backup
- reliability**—An attribute of any system that consistently produces the same results, preferably meeting or exceeding its requirements
- remix**—the process of creating something new from something old, originally a process that involved music; creating a new version of a program by recombining and modifying parts of existing programs, and often adding new pieces, to form new solutions
- router**—a device or software that determines the path that data packets travel from source to destination
- scalability**—the capability of a network to handle a growing amount of work or its potential to be enlarged to accommodate that growth
- security**—see cybersecurity
- simulate**—to imitate the operation of a real-world process or system
- simulation**—imitation of the operation of a real-world process or system
- software**—programs that run on a computing system, computer, or other computing device
- storage**—a mechanism that enables a computer to retain data, either temporarily or permanently; a place, usually a device, into which data can be entered, in which the data can be held, and from which the data can be retrieved at a later time; a process through which digital data is saved within a data storage device by means of computing technology
- string**—a sequence of letters, numbers, and/or other symbols. A string might represent, for example, a name, address, or song title (functions commonly associated with strings are length, concatenation, and substring)
- structure**—a general term used to discuss the concept of encapsulation without specifying a particular programming methodology
- switch**—a high-speed device that receives incoming data packets and redirects them to their destination on a local area network (LAN)
- system**—a collection of elements or components that work together for a common purpose (see computing system)
- test case**—a set of conditions or variables under which a tester will determine whether the system being tested satisfies requirements or works correctly
- topology**—the physical and logical configuration of a network; the arrangement of a network, including its nodes and connecting links; logical topology is the way devices appear connected to the user; physical topology is the way they are actually interconnected with wires and cables
- troubleshooting**—a systematic approach to problem solving that is often used to find and resolve a problem, error, or fault within software or a computing system
- user**—see end user
- variable**—a symbolic name that is used to keep track of a value that can change while a program is running, including numbers, text, whole sentences (strings), or logical values

(true or false); a data type associated with a data storage location; a value is normally changed during the course of program execution (this definition differs from that used in math)
